

# OPC DataHub™

**Are you getting the most out of your control data?**

*Now you can share valuable plant data with the people and programs that need it, wherever they are, without delay.*

*Across the room, or across the ocean, the OPC DataHub helps you get the most out of your control data.*

## Imagine the possibilities...

- ✍ Share data between remote locations, over a network or standard Internet connection.
- ✍ Access production data on management networks for enterprise planning and resource tracking.
- ✍ Analyze data in Excel and create dynamic reports with the most up to date shift totals and inventory numbers.
- ✍ Design custom web pages to view and modify your data from anywhere in the world using a standard web browser.
- ✍ Integrate data from Windows, Linux and QNX applications using a fully transparent cross-platform data channel.
- ✍ Wander around your plant viewing live process data on hand-held devices. And, if you need to make a change, enter the data right there and get instant feedback on the results.
